

# CSM3114 Project 1

BY: ELVINSON NG JIATAO S65531

# Problem

- Lack of a centralized and efficient system for monitoring exam eligibility and carry marks
- Students encounter challenges in obtaining real-time updates on their academic progress, leading to uncertainties about their eligibility for final exams.

# Potential Commercial Value:

1. **Enhanced Student Engagement:** providing real-time updates on exam eligibility and carry marks.
2. **Administrative Efficiency:** reduced administrative workload as students independently access their academic information.
3. **Data-Driven Academic Success:** The app supports a data-driven approach to academic success by offering insights into carry marks and eligibility status.
4. **Market Demand:** there is a growing market demand for user-friendly educational apps.

# Summary of prototype

- Lecturers can update students' carry marks
- Lecturers also can update students' attendance in a semester.
- Students can review their own carry marks for each subject and check their attendance status where they eligible to sit for that course's final examination or not.
